

bootStateSpace: Bootstrap for State Space Models

Ivan Jacob Agaloos Pesigan

Description

Provides a streamlined and user-friendly framework for bootstrapping in state space models, particularly when the number of subjects/units (n) exceeds one, a scenario commonly encountered in social and behavioral sciences. For an introduction to state space models in social and behavioral sciences, refer to Chow et al. (2010).

Installation

You can install the released version of `bootStateSpace` from [GitHub](#) with:

```
install.packages("remotes")  
remotes::install_github("jeksterslab/bootStateSpace")
```

More Information

See [GitHub Pages](#) for package documentation.
