

# bootStateSpace: Bootstrap for State Space Models

Ivan Jacob Agaloos Pesigan

## Description

Provides a streamlined and user-friendly framework for bootstrapping in state space models, particularly when the number of subjects/units ( $n$ ) exceeds one, a scenario commonly encountered in social and behavioral sciences. For an introduction to state space models in social and behavioral sciences, refer to Chow et al. (2010).

## Installation

You can install the released version of `bootStateSpace` from [GitHub](#) with:

```
install.packages("remotes")
remotes::install_github("jeksterslab/bootStateSpace")
```

## More Information

See [GitHub Pages](#) for package documentation.
